

Dear building contractor. We are Wood Haven Truss. We specialize in engineering and producing composite reinforced curved trusses. These trusses can be used for homes, garages, storage buildings, and even green houses.

Our trusses are ideal for adding a second story to a garage, shed or home. Simply put down a floor then add our roomy trusses for more living or storage space. The trusses can be made to handle up to 100 snow loads, are easy to insulate and create amazing extra spaces and spacious rooms in homes.

The Wood Haven Truss team will work with you and your customers to design a beautiful home or utility building to fit individual needs and dreams.

Here are some samples of what can be done.

Ask us about our latest product -- the Super Shed. The quonset hut style structure allows for a second story with 2x8 floor joists and 6'4" ceiling. This adds an additional 192 square feet to the 20 x 12 building. See separate flyer for all information.

Thank you,

Tom Krapp
